K-map for Q0 :

Abstract

This manual shows the implementation of 4to2 encoder using FPGA in vaman board.

00 0 0 0 1 01 0 0 0 11 0 0 0 10 1 0 0 0

binary encoder, is a multi-input combinational logic circuit

00

K-map for Q1:

D0D1

		00	01	11	10
D0D1	00	0	0	0	0
	01	0	1	0	0
	11	0	0	0	0
	10	1	0	0	0

Figure 1.1

1 Components

Components	Values	Quantity	
Vaman	ESP32	1	
JumperWires	M-M	9	
Breadboard		1	
LEDs	-	2	

2 Implementation

The truth table for Figure -1.1 is available in Table-1

D3	D2	D1	D0	Q1	Q0
0	0	0	1	0	0
0	0	1	0	0	1
0	1	0	0	1	0
1	0	0	0	1	1

TABLE 1.1

The Digital Encoder more commonly called a Binary Encoder takes ALL its data inputs one at a time and then converts them into a single encoded output. So we can say that a

Figure 2.1

Using Boolean logic, output Q0 Q1 in Table 1 can be expressed in terms of the inputs D0,D1,D2,D3 as

$$Q1=D3'.D2.D1'.D0' + D3.D2'.D1'.D0' (eq2.2)$$

The expressions in (2.1) AND (2.2) can be minimized by the observing the outputs logic

Thus, after minimization can be expressed as

 ${
m Q1} = {
m D2} + {
m D3}$ by eq2.2 Verify the truth table for Q0 and Q1 in TABLE 1.1.

2.1 SOLUTION:

2,4,5,10 Pins of vaman board are manually given inputs as D1,D2,D3,D0 Respectively and verify the logic of Q0,Q1 in Table 1

Encoder	· D1	D2	D3	D0	Q1	Q0
Vaman	2	4	5	10	32	33

TABLE 2.1

The code below realizes the Boolean logic for 4to2 encoder in 1.1 using 5V,GND of Vaman as binary Inputs with the help of breadboard and jumperwires. Built in LED at pin-32 of Vaman-esp32 will glow for the logic'1' of Q1,and off for the logic'0' of Q1 and a LED circuit at pin-33 of Vaman-esp32 will glow for the logic'1' of Q0,and off for the logic'0' of Q0
